

HG Engineering introduces the Flextrusion Tooling System to the Global Plastics Extrusion Industry

MCPHERSON, KS, October 27, 2010 - HG Engineering announces the introduction of the Flextrusion System to the global plastics extrusion industry at the K-Show in Dusseldorf, Germany. The system is used for a variety of plastics materials in pipe and profile extrusion.

The Flextrusion System was launched in the United States in early 2010 to overcome the challenges that plastic extrusion companies face when using traditional tooling. The Flextrusion System provides an unprecedented level of process control and the ability to adjust pipe sizes during startup and production. The Flextrusion System also maximizes heat transfer and significantly improves cooling efficiency of the extruded plastics.

“We have tremendous success with the Flextrusion System in regard to reducing our customers’ expenses while at the same time improving production efficiency and volumes,” stated Hans Groeblacher, President & CEO, of HG Engineering. “The system has exceeded our customers’ performance expectations, and we believe it will have a positive impact on the bottom line of any plastic extrusion company.”

HG Engineering selected the K-Show as the premier event to offer the Flextrusion System to the global pipe and profile extrusion companies due to its wide recognition and longstanding tradition for showcasing the industry’s newest technologies. This patent-pending technology offers the ability to increase production rates and quality while at the same time reducing operational expenses.

HG Engineering works with each customer to design and build each Flextrusion Tooling System to meet their specific requirements.

HG Engineering has more than 25 years experience in design and development of extrusion technology. The company works with a range of extrusion companies and equipment manufacturers across the globe. Through this experience, HG has gained a fundamental understanding of the challenges facing the extrusion industry. HG Engineering is dedicated to developing solutions to help customers overcome these challenges.
